

Exercise 1 (3 points)

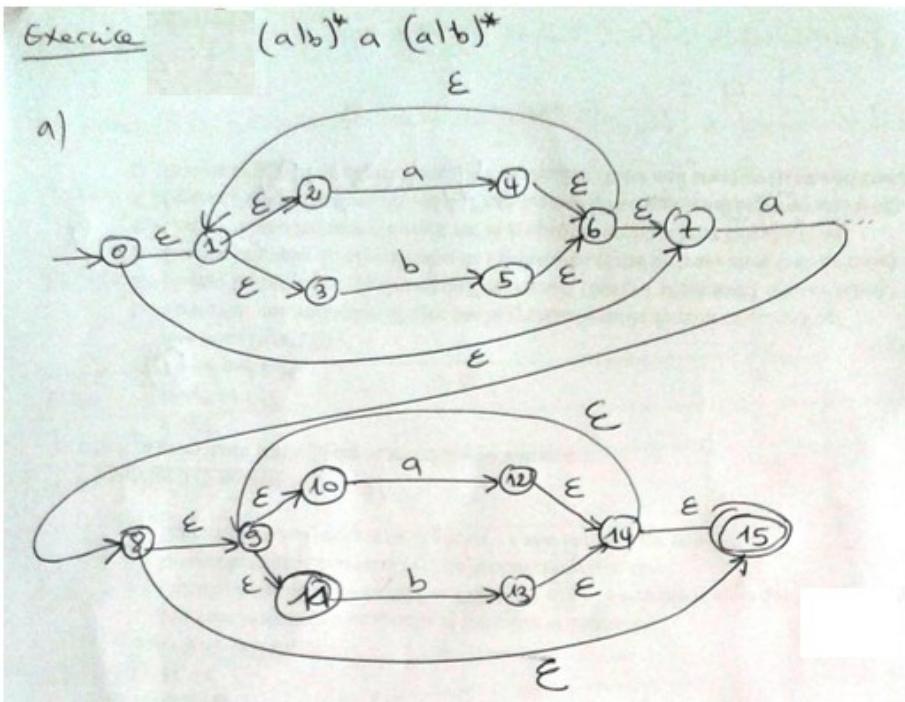

1. Uppercase [A-Z] (1.5 point)

Lettre[a-zA-Z]

Chiffre[0-9]

{ Uppercase |_ } ({Lettre} | {Chiffre}) *

2. (1.5 point)

Exercise 2 (7 points)

1. FIRST and FOLLOW sets

FIRST sets

- $FIRST(A) = \{ b, c \}$ (from $A \rightarrow bc \mid cb$)
- $FIRST(B) = \{ a, c \}$ (from $B \rightarrow ac \mid ca$)
- $FIRST(C) = \{ b, a \}$ (from $C \rightarrow ba \mid ab$)

For S:

$S \rightarrow aA \mid bB \mid cC$

So:

- $FIRST(S) = \{ a, b, c \}$

FOLLOW sets

S is the start symbol, so:

- $FOLLOW(S) = \{ \$ \}$

Now compute others:

From $S \rightarrow aA$

A is at the end, so $FOLLOW(A) \supseteq FOLLOW(S) = \{ \$ \}$

From $S \rightarrow bB$

B is at the end, so $FOLLOW(B) \supseteq FOLLOW(S) = \{ \$ \}$

From $S \rightarrow cC$

C is at the end, so $FOLLOW(C) \supseteq FOLLOW(S) = \{ \$ \}$

Thus:

- $FOLLOW(A) = \{ \$ \}$
- $FOLLOW(B) = \{ \$ \}$
- $FOLLOW(C) = \{ \$ \}$

Non-terminal	FIRST	FOLLOW
S	{a, b, c}	{ \$ }
A	{ b, c }	{ \$ }
B	{ a, c }	{ \$ }
C	{ b, a }	{ \$ }

2. LL(1) Parsing Table

Terminals: a, b, c, \$

Non-terminals: S, A, B, C

	a	b	c	\$
S	$S \rightarrow aA$	$S \rightarrow bB$	$S \rightarrow cC$	
A		$A \rightarrow bc$	$A \rightarrow cb$	
B	$B \rightarrow ac$		$B \rightarrow ca$	
C	$C \rightarrow ab$	$C \rightarrow ba$		

No conflicts appear, so the grammar is **LL(1)**.

3. Parsing Trace for the Input abc

Stack	Input	Action
S\$	abc\$	$S \rightarrow aA$
aA\$	abc\$	match a
A\$	bc\$	$A \rightarrow bc$
bc\$	bc\$	match b
c\$	c\$	match c
\$	\$	accept

Exercise 3 (5 points)

1. Compute all LR(0) item sets

Augment the grammar:

0. $S' \rightarrow \cdot E$
1. $E \rightarrow \text{not } E$

- 2. $E \rightarrow F$
- 3. $F \rightarrow \text{true}$

Compute all LR(0) item sets

- $I_0 = \{S' \rightarrow \cdot E, E \rightarrow \cdot \text{not } E, E \rightarrow \cdot F, F \rightarrow \cdot \text{true}\}$
- $I_1 = \Delta(I_0, E) = \{S' \rightarrow E \cdot\}$
- $I_2 = \Delta(I_0, F) = \{E \rightarrow F \cdot\}$
- $I_3 = \Delta(I_0, \text{not}) = \{E \rightarrow \text{not} \cdot E, E \rightarrow \cdot \text{not } E, E \rightarrow \cdot F, F \rightarrow \cdot \text{true}\}$
- $I_4 = \Delta(I_0, \text{true}) = \{F \rightarrow \text{true} \cdot\}$
- $I_5 = \Delta(I_3, E) = \{E \rightarrow \text{not } E \cdot\}$
- $I_6 = \Delta(I_3, F) = \{E \rightarrow F \cdot\}$

2. Compute FIRST and FOLLOW sets

Step 2a: FIRST sets

- $\text{FIRST}(F) = \{ \text{true} \}$ (since $F \rightarrow \text{true}$)
- $\text{FIRST}(E) = \{ \text{not}, \text{true} \}$ (since $E \rightarrow \text{not } E$ and $E \rightarrow F$)

Step 2b: FOLLOW sets

- Start symbol $E \rightarrow \text{FOLLOW}(E)$ contains $\$$
- Check productions:
 - $E \rightarrow \text{not } E \rightarrow$ nothing after $E \rightarrow$ add $\text{FOLLOW}(E)$ to E (already $\$$)
 - $E \rightarrow F \rightarrow$ nothing after $F \rightarrow$ add $\text{FOLLOW}(E)$ to $F \rightarrow \text{FOLLOW}(F) = \{ \$ \}$

Non-terminal	FIRST	FOLLOW
S'	{ not, true }	{ \$ }
E	{ not, true }	{ \$ }
F	{ true }	{ \$ }

3. Fill the SLR table

Rules:

- If dot is before terminal \rightarrow shift to the Δ state
- If dot is at the end \rightarrow reduce by the corresponding rule
- If start symbol completed \rightarrow accept

State table:

State	not	true	\$	E	F
I0	s3	s4		1	2
I1			acc		
I2	r2	r2	r2		
I3	s3	s4		5	6
I4	r3	r3	r3		
I5	r1	r1	r1		
I6	r2	r2	r2		

Exercise 4 (5 points)

Solution

a) Left Recursion Elimination and L-Attributed SDD

a) Eliminate Left Recursion

Original:

$E \rightarrow E \text{ or } E \mid F$

Transformed grammar:

$E \rightarrow F E'$

$E' \rightarrow \text{or } F E' \mid \epsilon$

$F \rightarrow (E) \mid \text{true} \mid \text{false}$

b) L-Attributed Syntax-Directed Definition

Production	Semantic Rules
1. $E \rightarrow F E'$	$E'.inh = F.val$ $E.val = E'.syn$
2. $E' \rightarrow \text{or } F E'_1$	$E'1.inh = E'.inh \text{ OR } F.val$ $E'.syn = E'_1.syn$
3. $E' \rightarrow \epsilon$	$E'.syn = E'.inh$
4. $F \rightarrow (E)$	$F.val = E.val$
5. $F \rightarrow \text{true}$	$F.val = \text{true}$
6. $F \rightarrow \text{false}$	$F.val = \text{false}$

c) Give the decorated (annotated) parse trees for the following expression: **(true or false) or (false or false)**
